

Main Loop: Contains 3 Objects for Playing Game, Objects are Input State, Game Manager, and Display

Input State: Gets input from user, passes to loop, uses info in Manager to proceed w/ gameplay

Game Manager: "Brains" of program, will contain most of the logic. Gives info to Display to see game, Gets info from Arena and Players 1 and 2.

Display: Visuals for Game, Depending on if you are playing console or GUI version, Methods should be similar

Arena: [or Board] Is used for showing the current state of the game. Keeps track of # of Dominoes in Boneyard and the Z values that are available to play

Player 1 (H): Pulls Dominoes from Boneyard and Is prompted by Manager to play a domino. Hand at the time will be available. Drawing from boneyard will be forced

Player 2 (C): Controlled by Manager, will play 1st Domino that is available to be played

Boneyard and Dominoes: Dominoes will be a point-coordinate system so (L,R) contain the Domino, flipping domino will be only method. Boneyard generates (i) dominoes for gameplay. Keeps a count for when Yard is empty. Will be contained in an arraylist.
